SUMMARY

Software engineer with 5+ years of experience building scalable, data-driven backend systems — asynchronous processing, search infrastructure, and event-driven architectures. I design and operate production systems end-to-end: microservices, LLM-powered products, cloud infrastructure as code, and CI/CD pipelines, with a strong emphasis on performance, reliability, and observability.

EXPERIENCE

heybooster — Software Engineer

11/2022 – Present

London, United Kingdom (Remote)

- Architected and developed **10+ production microservices from scratch** using FastAPI, Django, and Flask
- Led the company-wide **cloud migration from Google Cloud to Azure**: built the 14-VM fleet from the ground up, then re-provisioned it entirely with **Terraform** — VNet, NSGs, per-VM resource groups, remote state on Azure Storage — in a cross-region move to Frankfurt (ARM64, Ubuntu 24.04)
- Built a **white-label, multi-tenant AI assistant** over marketing data: an LLM tool-calling loop with Claude and Gemini behind a single provider-agnostic interface, prompt caching, and per-model usage quotas
- Built **data integration systems and OAuth 2.0 flows** for GA4, Google Search Console, Shopify, TikTok, Meta Ads, and Criteo — secure authentication, token lifecycle management, and multi-platform authorization at scale
- Migrated CI/CD to **GitHub Actions** self-hosted runners with GHCR: multi-arch (amd64/arm64) builds and **blue/green zero-downtime deploys** across 10+ services
- Deployed the core platform to **Azure Container Apps**, retiring VM-based deploys; running Celery workloads on Azure Managed Redis
- Built fleet-wide **observability**: Elastic APM across 9 services, Beats shippers, structured JSON logging, custom alerting, and self-hosted Sentry with release tracking
- Implemented **event-driven architectures** on AWS (Lambda, S3, ECS, CloudWatch) with distributed task processing on Celery, RabbitMQ, Amazon SQS, and EventBridge
- Integrated **Stripe billing** with signature-verified webhooks and async, event-loop-safe processing
- Designed advanced **search systems** on Elasticsearch & OpenSearch; optimized database performance across PostgreSQL, MongoDB, and MySQL
- Automated **backups to Azure Blob Storage** (databases, Elasticsearch snapshots, Redis); authored the team's bilingual infrastructure runbook and led code review practices

Denebunu — Backend Developer

02/2022 – 11/2022

Istanbul, Türkiye

- Developed RESTful APIs with Django REST Framework
- Built a **dynamic query builder** integrated with Elasticsearch for flexible data filtering; improved query performance across large datasets
- Managed deployments on Heroku and collaborated closely with frontend teams on API integrations

Türkiye

- Built site and residence management systems on the Django ecosystem
- Implemented **asynchronous task processing** with Celery, Redis, and RabbitMQ
- Optimized complex queries with Django ORM (annotations, aggregations); built interactive frontend components with JavaScript, jQuery, and AJAX

SKILLS

Backend	Python · FastAPI · Django · Django REST Framework · Flask
AI & LLM	Claude API · Gemini (Vertex AI) · LLM tool calling · Prompt caching
Data & Messaging	PostgreSQL · MongoDB · MySQL · Redis · RabbitMQ · Celery · Amazon SQS · Amazon EventBridge
Search & Analytics	Elasticsearch · OpenSearch · Kibana
Cloud & DevOps	Azure (VMs, VNet/NSG, Container Apps, Blob Storage, Managed Redis) · AWS (Lambda, ECS, S3, EC2, CloudWatch, CodePipeline, ECR) · Google Cloud VM (Compute Engine) · Terraform · Docker · GitHub Actions · Nginx · Linux
Other	REST API Design · CI/CD · Serverless · Event-driven Systems · Observability (Elastic APM, Sentry) · Payments (Stripe)

PROJECTS

Fişlik fislik.selamet.dev

Receipt photo sharing between small businesses and their accountants — FastAPI backend with Gemini-powered receipt extraction, admin panel, monthly credit system, and an installable PWA frontend.

pretty-lush github.com/selamet/pretty-lush

In-browser code formatter for 12 languages (Prettier, Ruff, sql-formatter) — encrypted snippet sharing, JSONPath, JWT decoder, offline PWA; code never leaves the tab.

letsraffle github.com/selamet/letsraffle-api

A simple and secure raffle platform with instant result generation — FastAPI REST API with Celery/Redis task queues and Dockerized deployment.

EDUCATION

B.Sc. Computer Engineering

2016 – 2020

Atatürk University, Türkiye

LANGUAGES

Turkish — Native

English — B2 (professional working proficiency)
